CELERY CABBAGE (Pe-tsai) Per 1b Improved Peking, or Chihili Makes torpedo shaped head, long and pointed at the top. The head is crisp and is of fine flavor. While the yield is not very heavy, it is more easily cultivated and matures very early. Very popular in the United States. This is a straight leaf of open heading type, tall growing and can be compared to Cos Lettuce in appearance. Very easy of cultivation and a heavy cropper. This is the variety which is often called Pe-tsai. Early and easy of culture, but produces head much more tender than other types. Not very large, but measures 8 inches in diameter and 14 inches in height. Light green in color and practically no analysis fibrous leaves grow. Its earliness and easy cultivation made this one of the most popular Pe-tsai now under cultivation. Although late summer or early autumn sowing is best, this variety may also be well adopted for spring sowing. ... An improved type of Wong Bok which forms a large solid head of very fine quality, often weigh 15 pounds. Stands long before bolting to seed. One of the best market varieties. A variety of Pe-tsai which is easy of culture, forming a large long head with light green leaves and pure white heart. If the spring is long, it can be grown for summer use. Seed sown in late March will make a head of about 6-7 lbs. in June. Also can be sown in summer as ordinary Pe-tsai cabbage, then they make large solid head. ... 0.30 This is one of the largest Pe-tsai, easily measuring 9 inches in diameter and 14 inches in height. The head is very solid and of excellent texture. The most prolific variety and a very popular market type. Wong Bok The most popular variety of Pe-tsai forming a large firm head. A good market variety. ... 0.30 Loose-headed variety with white centers. Heavy yielder with white tender center leaves which supplies a good salad. ... 0.35 A straight grower like Chihili, but not quite solid headed. Grows much larger with dark green leaves which are very delicious. A heavy yielder. CHOPSUY GREEN (Shungiku) This is one of the most important oriental greens belonging to the Chrysanthemum family. Highly valued because of its aromatic flavor. It is harvested when plant is 4-5 inches high and is cooked like Spinach. Very easy of culture and does not require any special attention,

| Green, comparatively smooth skinmed. Fi Hybrid No. 1 Extra early, velvesty black, oblong, small fruited. Visorous and prolific. Fi Hybrid No. 1 Extra early, velvesty black, oblong, small fruited.
